DETAILED ACTION

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means," "said," and "comprises" should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The abstract of the disclosure is objected to because the abstract contains word "comprises" in line 1. Correction is required. See MPEP § 608.01(b).

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

Art Unit: 2853

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-18, 21-22, and 38-54 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-18, and 38-54 of copending Application No. 10/773194 (Pub. No. US 2004/0160490) in view of Silverbrook (US Pat. 6,019,457).

Claims 1-18, and 38-54 of the copending application discloses the elements of the claimed invention. Claims 1-18, and 38-54 of the copending application teaches all the limitations of the claimed invention except for the strain of thermal expansion is relieved by rotation of the rotatable section within the plane of the heater element of claim 1 and where the rotatable section is ring shaped and co-axial with the bubble forming chamber of claim 4 from the claimed invention.

Claim 4 of the copending application teaches the rotatable section rotating and the arcuate sections lengthening due to thermal expansion to relieve the strain of thermal expansion. Silverbrook ('457) teaches in [Col. 9, Lines 20-23] a heater [440] having a main heater [441] and a redundant heater [443] each of which are annular or ring like. The main [441] and the redundant heater [443] surround the bubble forming chamber [447] coaxially in [Col. 9, Lines 26-28] shown in Figs. 12 and 13.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to apply a heater element with a rotatable section

Application/Control Number: 10/773,193

Art Unit: 2853

connected to arcuate sections to a heater element for the purpose of preventing the heater element bowing out of the plane of lamination. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to shape the rotatable section in a ring like form that is coaxial to the bubble forming chamber for the purpose of exerting near equal pressure to all sides of the ink drop.

This is a provisional obviousness-type double patenting rejection.

5. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer <u>cannot</u> overcome a double patenting rejection based upon 35 U.S.C. 101.

6. Claims 19-20, and 23-37 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 19-20, and 23-37 of copending Application No. 10/773194 (Pub. No. US 2004/0160490). This is a <u>provisional</u> double patenting rejection since the conflicting claims have not in fact been patented.

Claim Objections

7. Claim 22 is objected to because of the following informalities: two periods exist at the end of the claim. Appropriate correction is required.

Application/Control Number: 10/773,193

Art Unit: 2853

Claim Rejections - 35 USC § 112

- 8. The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 9. Claim 21 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 10. Claim 21 recites the limitation "the rotatable section" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art references (US 2002/0008732; US Pat. 5,905,517; US Pat. 4,894,664; US Pat. 6,460,961; US Pat. 4,870,433; US Pat. 6,340,233; US Pat. 4,490,728) cited in PTO 892 form show elements that are deemed to be relevant to the present invention. These references should be reviewed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Han S. Choi whose telephone number is (571) 272-8350. The examiner can normally be reached on Monday - Friday, 8:30am to 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Meier can be reached on (571) 272-2149. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
